Teens lose sleep.

Do you have a TV, computer or music system in your bedroom? Do you ever fall asleep watching TV or listening to music? Researchers in Britain and the US say that many teens aren't getting enough sleep because of all the electrical gadgets in their bedrooms.

Some teens leave TV or iPod on all night, and most sleep with their mobile phones close by. Max Stones (16), from Chester, in the UK, says she goes to sleep with her mobile phone under her pillow, just in case a friend sends her a text message. She admits she'll answer to the message even if it's 3 AM! In a recent survey, 97% of teens said they have at least one electronic item in their bedroom; in fact, most secondary students have four. The noise from these devices means their owners wake up during the night, while light from the computer or TV screen tricks their brains into thinking it's daytime. Experts call this phenomenon "junk sleep" - that is, sleep that isn't long enough or deep enough to give the brain a proper rest.

But why is it important for young people to get proper sleep? Scientists believe that some areas of the brain store information even when a person is asleep. Without proper sleep, the brain can't store or process new information and it's tough to focus and acquire new tasks. This means that exhausted teens can't get out of bed in the morning and they don't perform well at school. What's more, teens who are tired eat lots of sweets and starchy food to boost themselves up, which contributes to the issue of obesity.

Educators and scientists agree that teens need to be taught that a healthy lifestyle means plenty of healthy food, exercise and uninterrupted sleep. So what can parents do to solve the problem? The easiest thing is to remove the electrical gadgets from the bedroom or to just turn them off. Unfortunately, that's easier said than done.

Tips for a good night's sleep:

- Turn off the TV, PC and music by 9 PM to prepare the brain for sleep.
- Keep your bedroom dark.
- Avoid bright light in the evening.
- Do a relaxing activity before you go to sleep.

3.1 True or False. Copy the evidence from the text using Quotation Marks.

1. The brain needs proper rest in order to keep on learning new processes and store information.

2. Less than half of the teen population in the United Kingdom has an electronic device in their bedroom while resting.

3.2 Answer the questions:

1. According to educators and scientists, what are the elements of a healthy lifestyle?

2. How does junk sleep affect teens' performance at school?

3.3 Find a synonym in the text for the following terms.

1. Beside _____

2. Carry Out _____

3. Problem _____

4. Fit

4. Write an e-mail to a friend describing an electronic gadget you just bought or would like to buy. Include the following information:

- What it is
- What it can do
- What's special/useful about it
- Why you want/wanted it
