Your Summer Guide to Hair Removal

Threading and Plucking

How it works. A salon worker twists a thread and moves it across the skin, catching unwanted hairs between them. As the string untwists, it pulls out the hair. Any remaining hair is plucked out with tweezers.

- **Pros:** Excellent for brow-shaping because it creates straight lines.
- **Cons:** Can lead to ingrowing hairs.

Waxing

How it works. An esthetician applies hot wax to the skin and places a paper strip over the wax. Then, the worker quickly and firmly pulls off the strip, taking the hair along with it.

- **Pros:** Lasts up to eight weeks because the hair is pulled out from the root.
- **Cons:** Painful and can leave skin red and irritated.

Depilatory Creams

How it works. The cream is applied directly to the skin and allowed to soak in, during which time the chemicals in the cream break down hair. Then, the hair can easily be washed off.

- **Pros:** Painless and inexpensive.
- **Cons:** Can cause chemical burns and lasts for a few days.
